Age structure is one of the more important variables in understanding the characteristics of the population. This table provides information on 5 and 10 year age groups known as age cohorts. The figure provides a picture of how persons are distributed throughout the lifecycle. Some questions to ask are: 1) Are there many or few youth and children? 2) Is there a large proportion and number of elderly persons? 3) Is the population from ages 40 to 59 (baby boomers) in this area proportionally more or less than the national norm?
